

Presentation Script for Big Data Specialist team

1. About Me

My name is **Borislav Bosnic**. I am 30 years old and I have a degree in **Electrical Engineering**, with a specialization in **Software Engineering**.

- I have been programming in one form or another for about **15 years**.
- I have been working in a **data science team for 7 years**.

During my career I have worked on many important projects. Some of them were at one time considered the best in the world.

One example is from **2019**, when I built a **machine learning tool for website categorization**. This tool won a competition against a solution based on **IBM Watson**.

For this achievement I received a prestigious **“Rookie of the Year”** award, a trophy, and a financial reward.

Since **2020** I have been sharing my knowledge through this community. In the beginning I could dedicate a lot of time to it. Later, life became more complex, my responsibilities grew, and the community became too large for one person to manage. That is the main reason why I created a team and why we now need clear structure, expectations and workflows.

2. What Our Community Is

Our community has existed for **more than 5 years**. From the beginning the goal was to help people learn, not to make money.

Today the community includes many **Telegram channels** and other social networks. In total, across all platforms, we reach around **200 thousand people**, which is a huge number and a big responsibility.

3. Telegram Channels

Here is the list of our main Telegram channels and their approximate subscriber counts:

- **@ai_revolution_bds** – 800
- **@bigdataspecialist** – 27,889
- **@chatgpt_bds** – 2,308
- **@coding_interview_preparation** – 5,815
- **@datascience_bds** – 12,969
- **@data_science_research_papers** – 2,501
- **@data_visualization_bds** – 6,170
- **@github_repositories_bds** – 9,011
- **@programming_memes_bds** – 1,141
- **@python_bds** – 5,952
- **@tech_news_bds** – 3,425
- **@web_dev_bds** – 3,936

We are also planning to **start posting again** in several channels that are currently inactive, such as:

- The **Free Books** channel
- The **Code Comics** channel
- The **Programming Quiz** channel

These channels will need content and attention in the near future.

4. Other Social Networks

Besides Telegram, our community is present on many other platforms:

- **X** – about 50 followers
- **Discord** – around 2,900 members
- **LinkedIn** – about 7,500 followers on the main profile, plus two additional smaller LinkedIn pages
- **Pinterest** – around 1,700 followers
- **Instagram** – around 65,000 followers
- **Threads** – around 18,200 followers
- **WhatsApp** – about 35 different groups at the moment
- **Facebook** – we have a page, but currently nobody takes care of it

For **WhatsApp** the plan is:

- To **merge all existing groups into one main channel** for better structure.

- There is also a possible future plan to open **one WhatsApp channel for each Telegram channel**, which would mirror and support our Telegram activity.

All these networks together form our communication ecosystem. Your work as a team will directly influence how active and healthy this ecosystem is.

5. Team Mission and Responsibilities

Your job as team members is to make sure that **all our networks work well**.

This includes:

1. Content preparation

- Finding or creating content for posts on Telegram, Instagram, Threads and other platforms
- Preparing texts, images, carousels, short videos and stories
- Making sure content is correct, valuable and aligned with our community values

2. Posting and scheduling

- Making sure that channels never go quiet for long periods
- Using our tools to check how many posts are scheduled in advance
- Keeping a healthy posting rhythm on each channel

3. Engagement with followers

- Responding to comments and questions
- Answering direct messages where appropriate
- Encouraging discussions under posts
- Being polite, helpful and professional in communication

4. Engagement with other accounts

- Liking, commenting and sharing interesting posts from other pages
- Building connections with related communities and creators
- Helping our channels grow through organic interaction

5. Handling requests from users

- From time to time users ask for **free courses or books**
- These requests should be collected and forwarded to the **“User requests”** topic so researchers can find appropriate materials

6. Promotion of our networks

- Helping with campaigns that promote our channels and projects

- Sharing links when appropriate, without spamming

7. Ideas and problem solving

- Suggesting new content formats and concepts
- Helping to solve current issues in workflows or tools
- Taking initiative when you see an opportunity to improve something

8. Additional tasks

- Sometimes you will get special tasks, like writing documentation or testing tools
 - For example, one current task is creating a **knowledge base document for new members** that explains our workflows and processes
-

6. Monetization and Why It Matters Now

For more than five years this community has mostly existed **without any focus on profit**. The main goal has always been to help people learn and grow in programming and data science.

However, now that:

- The community has grown to about **200 thousand people in total**
- There is a **team of multiple members**
- I am responsible for ensuring the team has stability

it is necessary to think more seriously about **monetization**.

At the moment we are **not earning anything significant** from this ecosystem. That is not sustainable in the long term. The goal for the upcoming period is to **implement and test different monetization options**, while always keeping our values and the quality of content.

Possible Monetization Types

1. Paid advertisements and sponsored posts

- Promoting tools, platforms or courses on any of our networks

2. Affiliate marketing

- Recommending products or courses where we earn a commission when users buy

3. Our own digital products

- Writing and publishing books or ebooks
- Creating our own online courses and structured learning paths

4. Merchandise

- Clothing or accessories with our logo
- Items with programming or tech memes

All of this will be done carefully, so that monetization does not destroy trust but rather supports the community and the team.

7. Key Strategic Project – LearnDevs.com

Our most important project is the web platform **LearnDevs.com**.

LearnDevs is an **all in one platform for developers and IT people**. The idea is to gather everything that programmers need in one place.

Planned features include:

- Programming and data science **courses**
- **Books** and reading lists
- Curated **GitHub repositories**
- **News** and **blogs** about technology
- **Free coupons** for paid courses
- **Job offers** and career resources
- Many other tools and materials that help learning and professional growth

The platform has been in **active development for about three years**. We expect to launch it around **New Year**.

Every team member should:

- Visit LearnDevs.com
 - Get familiar with the concept and current state
 - Understand that this project is central to our long term strategy
-

8. What Is Expected From You

In summary, you are expected to:

1. Take care of **all social media channels** and repetitive tasks such as content preparation.
2. Participate in **idea generation** and help **solve ongoing problems**.
3. Accept and complete **additional tasks** when needed, such as writing documentation or testing new tools.
4. Use our tools and structures instead of working in a chaotic way.
5. Communicate clearly with the rest of the team.

When you are going to be absent for **longer than 24 hours**, you should notify the team in the **“Absence notifications”** topic so we know what to expect and can plan around it.

9. Why This Structure Is Important

My own time is **extremely limited**. I have very little free time and it is important to use that time in the best possible way.

The best use of my time includes:

1. Monetization and partnerships

- Negotiating monetization opportunities
- Signing agreements with companies
- Holding meetings with well known organizations

I have already had meetings with people from companies such as **DataFlair**, **Analytics Vidhya**, **SwitchX** and **SPOTO Learning**, among others.

2. Working on the LearnDevs platform

- This platform is key for the future of the community
- It requires focus and long uninterrupted work sessions

3. Building tools that save time

- I have already created tools that **automatically prepare posts** for some of our channels, for example:
 - The **GitHub Repositories** channel
 - The **Data Science Research Papers** channel
- The more time I have for building such tools, the **less manual work** the team will need to do in the future. Content preparation and scheduling will gradually become more automated.

Your work on daily tasks gives me the freedom to focus on these high impact activities, which then makes your work easier over time.

10. Tools We Use

10.1 Nuclino – Our Knowledge Base

Link: <https://app.nuclino.com/Big-Data-Specialist-staff/Company-Wiki>

Nuclino is our **central knowledge base**. Everything you need to know about the community can be found there. It contains:

- Documentation about our tools
- Lists of websites where we find content for our channels
- Collections of **Instagram pages**, **LinkedIn groups**, **X accounts** and other sources that share high quality content

- Lists of websites with **free courses**, **books** and **learning materials**
- Explanations of workflows and internal processes

Whenever you are unsure about something, Nuclino is usually the first place to check.

10.2 Internal Tools Created by Borislav

1. Scheduling status dashboard

- Link: <https://musical-biscotti-7d2753.netlify.app/>
- Purpose: to track the state of **scheduled posts** for each channel.
- It shows whether there are enough posts prepared in advance or if a channel needs new content to be scheduled.

2. Task list and assignment space

- Link: <https://bigdataspecialist.lovable.app/>
 - Purpose: to see **which tasks are assigned to you**, and to track progress.
 - This helps keep work organized and transparent.
-

11. Communication Channels and Topics

We use two main Telegram groups for internal communication.

11.1 Fantastic 10

- This is our group for **general communication** between team members.
- Use it for everyday questions and quick coordination that is not tied to a specific topic.

11.2 BDS Community Stuff

This is a **large group with many topics**. Each topic has a specific purpose. The idea is to use topics in an organized way instead of spamming everything in one place.

Below are the most important topics and what they are used for:

1. General

- General messages that are not related to any specific project or topic.

2. Carousel posts FINAL

- Here I or the designers share **compressed final carousel posts** that are ready to be posted on Instagram.
- Each carousel usually has up to **10 slides**.

3. Single posts FINAL

- Same idea as the previous topic, but for **single image posts** instead of carousels.

- A single post has only **one slide**.

4. Reels post final

- Final versions of **Reels** that are ready to be posted on Instagram.

5. Instagram post design

- Contains **links to Canva designs** of Instagram posts we are working on.
- Used for discussion, feedback and editing of designs.

6. Instagram story images

- Collection of **interesting memes, news or images** that could be shared as **Instagram Stories**.

7. Instagram story quiz

- Contains **questions** that can be turned into **quiz stickers** in Instagram Stories.

8. IG post ideas

- If you have an idea for a future Instagram post, you write it here.
- This is our backlog of creative ideas.

9. User requests

- When followers ask for **specific free courses, books or resources**, we forward these requests here.
- Our researchers then try to find appropriate materials.

10. Offtopic

- For **random casual talk** that is not related to programming or the community.
- Helps keep other topics clean.

11. Canva pro links

- From time to time I share **free Canva Pro subscription links** here.
- Canva is a design tool that normally costs more than 100 dollars per year.

12. Absence notifications

- When you plan to be **absent for longer than 24 hours**, you should notify the team here.
- This helps planning and avoids confusion.

13. Announcements

- Used for **important announcements** to the team.
- Everyone should read this topic regularly.

14. Valuable links

- Self explanatory.

- Contains **good sources** where we can find courses, books, useful materials and similar resources.

15. Instagram discussion

- Discussion related specifically to **Instagram strategy, posts and performance**.

16. Telegraph post discussion

- Discussion about **Telegram posts**, plans for upcoming content and feedback on existing posts.

17. This community internal links

- Contains links to **all our Telegram channels and social networks** so they are easy to find in one place.

In general, the rule is:

- Use each topic only for its intended purpose.
- Avoid spamming the group with random messages.
- Treat each topic as a **register or archive** of a particular type of content, such as final designs, ideas or announcements.

12. Closing Message to the Team

The community we have built is powerful, with around **200 thousand people** across all platforms. It has already helped many learners and professionals. With a structured team, clear workflows and the right tools, we can:

- Keep providing **high quality free content**
- Create **new opportunities** for our members
- Build **sustainable monetization** that supports everyone involved
- Launch and grow **LearnDevs.com** into a central hub for developers

Your work is essential to all of this. With your help on daily tasks and community management, I can focus on monetization, partnerships, platform development and automation tools that will make everybody's life easier in the long run.
